

# DXRE\*J\*

## DIRECTIONAL CONTROL VALVES OPERATED BY HIGH RESPONSE VALVE, WITH OBE AND FEEDBACK

### SUBPLATE MOUNTING

|          |                            |
|----------|----------------------------|
| DXRE5RJ* | ISO 4401-05                |
| DXRE7J*  | ISO 4401-07                |
| DXRE8J*  | ISO 4401-08                |
| DXRE9J*  | ISO 4401-08 oversize ports |
| DXRE10J* | ISO 4401-10                |
| DXRE11J* | ISO 4401-10 oversize ports |

### OPERATING PRINCIPLE

- DXRE\*J\* are directional control valves operated by a servo-proportional valve, with mounting surface compliant with ISO 4401 standards. The main spool position is controlled by a linear transducer LVDT in closed loop, which ensures high precision and repeatability.
- The valve is featured by integral electronic based on SMD technology which ensures standard regulations and simplifies the electric wiring. The valve doesn't require any adjustment other than the possible electronic set of the zero point.
- Two types of integrated electronics are available: for analogue signals or for fieldbus.
- These valves are suitable for applications in closed-loop position, speed and pressure control systems. Without power supply or enable input, the main spool is pushed and held in a fail-safe position by the centring springs.

### HYDRAULIC SYMBOL (typical)

### PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50 °C and p = 140 bar)

Pin C function:  
**A** = external enable  
**B** = internal enable  
**C** = 0V monitor

Main connector:  
6 pin + PE

Reference signal:  
**E0** = voltage  $\pm 10$  V  
**E1** = current  $4 \pm 20$  mA

Drain:  
**I** = internal  
**E** = external

Pilot supply:  
**I** = internal  
**E** = external

### 1.2 - Surface treatments

The standard valve is supplied with surface treatment of phosphating black.

The zinc-nickel finishing makes the valve suitable to ensure a salt spray resistance up to **600** hours (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

**1.3 - Electronics with fieldbus communication**

## 3 - AVAILABLE CONFIGURATIONS

The valve configuration depends on the combination of spool type and rated flow.

### 3 positions with spring centering

| valve type | *    | Controlled flow with $\Delta p$ 10 bar P-T |
|------------|------|--------------------------------------------|
| DXRE5RJ    | 100  | 100 l/min                                  |
| DXRE7J     | 120  | 120 l/min                                  |
|            | 220  | 220 l/min                                  |
| DXRE8J     | 250  | 250 l/min                                  |
|            | 400  | 400 l/min                                  |
| DXRE9J     | 480  | 480 l/min                                  |
| DXRE10J    | 800  | 800 l/min                                  |
| DXRE11J    | 1000 | 1000 l/min                                 |

### detailed symbol (spool Z)

### FAIL SAFE POSITION for Z SPOOLS

When a power failure occurs, or when there is no enable input (K11A version), the main spool is moved to the offset position by the springs, with limited opening (1%...6% of the main spool stroke in P-B / A-T direction).

## 4 - ELECTRONICS COMMON DATA

|                                                                                   |      |                                                                                                   |

### 5.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

VERSION C - 0V Monitor

## 5.3 - Version with voltage command (E0)

The reference signal must be between -10V and +10V. The monitor feature of versions B and C becomes available with a delay of 0.5 sec from the power-on of the card.

## 5.4 - Version with current command (E1)

The reference signal is supplied in current  $4 \div 20$  mA. If the current for command is lower than 4 mA the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0.5 sec from the power-on of the card.

## 6 - DXRE\*JH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoid.

Command - valve position schemes as for the standard electronics. Please refer to pictures in points 5.3 and 5.4.

### 6.1 - Electrical characteristics

### 6.3 - FIELDBUS connections

Please wire following guidelines provided by the related standards communication protocol. Any connections present and not used must be protected with special caps so as not to nullify the protection against atmospheric agents.

#### X2 (IN) connection M12 D 4 pin female

| Pin     | Values | Function    |
|---------|--------|-------------|
| 1       | TX+    | Transmitter |
| 2       | RX+    | Receiver    |
| 3       | TX-    | Transmitter |
| 4       | RX-    | Receiver    |
| HOUSING | shield |             |

#### X3 (OUT) connection: M12 D 4 pin female

| Pin     | Values | Function    |
|---------|--------|-------------|
| 1       | TX+    | Transmitter |
| 2       | RX+    | Receiver    |
| 3       | TX-    | Transmitter |
| 4       | RX-    | Receiver    |
| HOUSING | shield |             |

**NOTE:** Shield connection on connector housing is recommended.

## 7 - CHARACTERISTIC CURVES

(with mineral oil with viscosity of 36 cSt at 50 °C, DXRE\*J-\*\*\*\*K11C valves)

Typical flow rate curves at constant  $\Delta p$  (5 bar per control edge), related to the reference signal.

### DXRE\*J, spools types C and A:

Valves with spools type C and A are configured to start opening to a given percentage of the reference signal. This percentage differs depending on the versions. It is 5% for DXRE\*J...E\*K11C and 10% for DXRE\*J...E\*K11A and DXRE\*J...E\*K11B.

See table below.

| valve type                 |         | opening values   |                      |
|----------------------------|---------|------------------|----------------------|
|                            |         | E0 [ $\pm 10$ V] | E1 [ $4 \div 20$ mA] |
| DXRE*J...E*K11C            | 5% ref. | -0.5...0...+0.5  | 11.6 ...12...12.4    |
| DXRE*J...E*K11A, ...E*K11B | 10% ref | -1...0...+1      | 11.2...12...12.8     |

DXRE\*JH, spools types C and A: the start opening percentage is 10%.

## 9 - HYDRAULIC CHARACTERISTICS

(with mineral oil with viscosity of 36 cSt at 50°C)

|                                                |                 | DXRE5RJ* | DXRE7J* | DXRE8J* | DXRE9J* | DXRE10J* | DXRE11J* |
|------------------------------------------------|-----------------|----------|---------|---------|---------|----------|----------|
| Max flow rate                                  | l/min           | 180      | 450     | 900     | 1000    | 1600     | 3500     |
| Piloting flow required for operation 0 →100%   | l/min           | 7        | 13      | 28      | 28      | 35       | 35       |
| Piloting volume required for operation 0 →100% | cm <sup>3</sup> | 1.7      | 3.2     | 10      | 10      | 22       | 22       |

| <b>PRESSURES</b> (bar)                 | MIN | MAX |
|----------------------------------------|-----|-----|
| Pilot supply pressure on X port        | 15  | 250 |
| Pressure on T port with internal drain | -   | 30  |
| Pressure on T port with external drain | -   | 250 |

### 9.1 - Pilot and drain

The DXRE\*J\* valves are available with pilot and drain both internal and external.

The version with external drain allows a higher back pressure on the discharge line.

**NOTE:** The configuration of pilots and drains must be chosen when ordering. Subsequent modifications are allowed only to specialized operators with authorization and in factory.

| TYPE OF VALVE |                                   | Plug assembly |     |

Valve fastening: 6 SHC screws ISO 4762 M20x70 (supplied)

Tightening torque: 470 Nm (A10.9 screws)

Threads of mounting holes: M20x40

## 14 - MOUNTING SURFACES

### DXRE5RJ\*

ISO 4401-05-05-0-05  
(CETOP 4.2-4 R05-350)

### DXRE7J\*

ISO 4401-07-07-0-05  
(CETOP 4.2-4-07-350)

### DXRE8J\*

ISO 4401-08-08-0-05  
(CETOP 4.2-4-08-350)

### DXRE9J\*

ISO 4401-08-08-0-05  
deviating from standard:  
P, T, A, B ports Ø32

### DXRE10J\*

ISO 4401-10-09-0-05  
(CETOP 4.2-4-10-350)

### DXRE11J\*

ISO 4401-10-09-0-05  
deviating from standard:  
P, T, A, B ports Ø48

## 15 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

## 16 - INSTALLATION

The valves can be installed in any position without impairing correct operation. Make sure the hydraulic circuit is free of air.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

Take care to the cleanliness of the mounting surfaces and surrounding environment upon installation.

## 17 - ACCESSORIES

(to be ordered separately)

### 17.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

We recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

### 17.2 - Mating connectors for fieldbus communication.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

### 17.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm<sup>2</sup>
- up to 40 m cable length : 1,5 mm<sup>2</sup>

Cross section for signals (command, monitor):

- 0,50 mm<sup>2</sup>

### 17.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic. See catalogue 89 850.

## 18 - SUBPLATES

(see catalogue 51 000)

Subplates are not available for DXRE5RJ, DXRE9J, DXRE10J and DXRE11J.
